A Talan[★] Company

ICT OPERATIONS OPTIMIZATION

Operational Performance Improvement

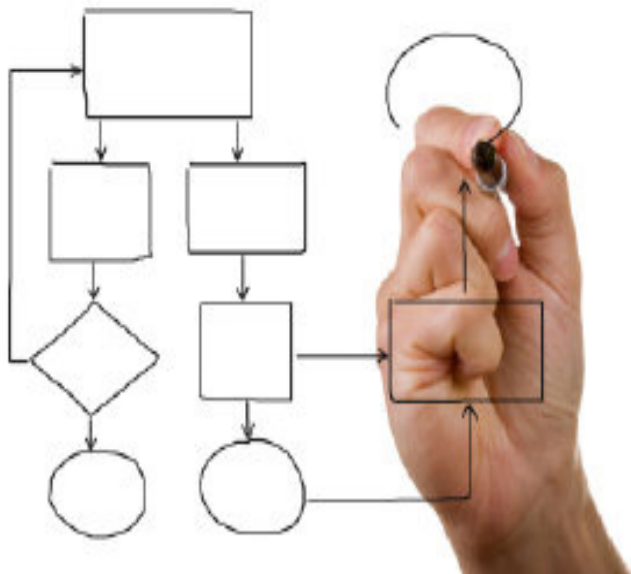

- > Standardise your operations and delivery business practices
- > Improve your demand management process
- > Be proactive in maintaining and improving your service level

OPTIMIZATION OF INFORMATION AND COMMUNICATION TECHNOLOGIES (ICT) OPERATIONAL PROCESSES

enables organizations to quickly respond to requests, and even anticipate them, while maintaining a stable infrastructure that must integrate an increasing number of new technologies.

Createch has developed a structured approach of process optimization. Inspired by the LEAN philosophy and ITIL® v3 framework, it promotes a more efficient IT service management and control of daily operations. This approach aims to integrate good practices relevant to your industry in optimizing work organization, methods, procedures and business rules. An IT management framework maximizes value creation by your team and minimizes inefficiencies and waste.

Maximize the performance of your ICT operations!
